<http://jtt.io>

In my decade of both back and frontend web development, I've seen the web come of age as the best platform for developing applications. I am very passionate about leveraging current and emerging technologies to craft maintainable, high-performance web applications with effective UI design to provide a superior user experience.

Skills

Languages: Javascript, Coffeescript, Python, Sass, PHP, HTML, CSS, SQL, Ruby, shell, C/++

Selected Technologies: jQuery, MooTools, Zepto, underscore/lodash, Compass, Bourbon/Neat, Bootstrap, Grunt.js, Bower, Yeoman, Angular, Backbone, Marionette, Node, Django, git, mercurial, Subversion, npm, pip, pythonbrew, haml, Handlebars/Moustache, MySQL, PostgreSQL, Photoshop, Fireworks, OS X, lin Windows, Express, Jade, Rails, Jekyll, Vagrant

Selected Work History

SearchTempest Online Inc
Aug 2010 - Apr 2013
As the only member alongside the founder, I wore many hats while working on <http://searchtempest.com> and <http://autotempest.com>. I wrote most of the current frontend code, did the design for the sites, contributed PHP and SQL in the backend, and was the chief resource for UX, UI, and design matters. I streamlined our workflow by introducing many current technologies such as Sass, Coffeescript, and Grunt. SearchTempest has had as many as 50,000 daily unique visitors generating 300,000 page views.

Indivision Network
Jan 2005 - Aug 2010
Semi-recurring contract work for a local web shop that produces bespoke CMS-powered websites for the public sector, artists and musicians. I mostly worked on the frontend, integrating Javascript modules, realizing photoshop mockups in standards-compliant HTML/CSS, and adding features to the custom PHP/MySQL CMS. Some of the many sites I worked on include: <http://livevictoria.com>, <http://artsvictoria.ca/>, <http://jonandroy.ca/>, <http://youthcore.ca>, and <http://thevillagerrestaurant.ca/>.

Kaboose
Apr 2008 - Nov 2008
As a web developer at Kaboose before they were acquired by Disney, I was responsible for maintenance and feature requests on <http://babyzone.com>, a site written in VBScript. As the predominant resource for expectant and recent mothers, it had up to 3.2 million daily page views and attracted advertisers such as Proctor & Gamble and its subsidiaries.

Contractor/Consultant
Jan 2004 - current
In addition to my contract work with Indivision Network, I have developed and designed a number of web sites and applications using a diverse set of technologies. Recent examples include <http://gochrono.com> (Django, Backbone/Marionette), and OneFeather, a upcoming Rails4-based responsive web application that will allow aboriginal groups to use the internet to more effectively communicate with one another.
